This book is superb.I have read Bishop's book also on neural networks, but this book by far provides the best possible exposition to the field. The author has provided good motivation for considering multi layered neural nets and has gone into more advanced materials like recurrent/attractor neural nets etc.

Neural Networks is an integral component for the ubiquitous soft computing paradigm. An in-depth understanding of this field requires some background of the principles of neuroscience, mathematics and computer programming. Neural Networks: A Classroom Approach, achieves a balanced blend of these areas to weave an appropriate fabric for the exposition of the diversity of neural network models.

The XOR Problem and Solution The Mind Project

In order to solve the problem, we need to introduce a new layer into our neural networks. This layer, often called the 'hidden layer', allows the network to create and maintain internal representations of the input. Here's is a network with a hidden layer that will produce the XOR truth table above: XOR Network. From Rumelhart, et al. 1986, p 64.

Different Types Of Neural Networks Neural Network Types

Input layer represents dimensions of the input vector. Hidden layer represents the intermediary nodes that divide the input space into regions with (soft) boundaries. It takes in a set of weighted input and produces output through an activation function. Output layer represents the output of the neural network.

An Introduction to Backpropagation Algorithm

We can define the backpropagation algorithm as an algorithm that trains some given feed-forward Neural Network for a given input pattern where the classifications are known to us. At the point when every passage of the example set is exhibited to the network, the network looks at its yield reaction to the example input pattern.
