Oscillation theorems for nonlinear fractional difference

In this study, we discuss some theorems related to the oscillatory behavior of nonlinear fractional difference equations equipped with well-known fractional Riemann Liouville difference operator. Then we give an example for the illustration of the results obtained.

Forced oscillation for solutions of boundary value

In this paper, we obtain the forced oscillation of solutions for certain fractional partial difference equations with two different types of boundary conditions. Our results are based on discrete Gaussian formula and some basic theories of discrete fractional calculus.

The topics mentioned have also a strong relation to the theory of non-linear boundary value problems. This issue is devoted to non-linear oscillations in a broad sense and will cover the related topics for non-linear systems of differential equations, equations with retarded argument and more general functional differential equations.
