Skin Cells layers and histological features Kenhub

Skin histology. This article will describe the anatomy and histology of the skin. Undoubtedly, the skin is the largest organ in the human body; literally covering you from head to toe. The organ constitutes almost 8-20% of body mass and has a surface area of approximately 1.6 to 1.8 m², in an adult.

Intro to Dermatopathology Processing Skin Specimen for

Skin specimens received in the histology laboratory for dermatopathology are among the most difficult to handle successfully. The pathologist must be able to see the dermal-epidermal junction in each tissue section in order to make a diagnosis, thus every skin specimen must be accurately oriented during both grossing and embedding.
