### **Importance of Testing in Software Development Life Cycle**

During the software development lifecycle errors occur and defects are inevitably introduced. Most organizations are aware of the importance of testing within the software development life-cycle in order to detect and remove these defects. Research has shown that the test process frequently accounts for 40% of the cost of software development.

### **How Testing Fits Into Software Development Lifecycle**

Within a testing cycle, QAs are tasked with validating the software against requirements outlined in the design specifications. This involves not only verifying the functionality and behavior of the software but also testing its reliability.. Software QAs and developers need to work closely together to streamline the testing and development rounds.

### **Testing vs proof in software development note**

Automatic complete apodictic proof of software correctness is as impossible as automatically making software at least, as long as software is a deliberate, willful, activity. So testing and proof are really about different things or at least they are best used as such. Testing is comparison, proof is inference.

### **Software Quality and Fitness for Purpose The Abnormal**

Martyn and I would agree on the lack of evidence that clean and tidy SW development processes entail any concrete property of the resulting code (such as fitness for purpose). Martyn would also suggest, citing work of Andy German of QinetiQ, that higher DALs in DO178B do not necessarily correlate with higher-quality software.
